Data Science

Machine Learning

Machine learning is an application of artificial intelligence (AI) that provides systems the ability to automatically learn and improve from experience without being explicitly programmed. Machine learning focuses on the development of computer programs that can access data and use it learn for themselves.

Artificial Intelligence

In computer science, artificial intelligence, sometimes called machine intelligence, is intelligence demonstrated by machines, in contrast to the natural intelligence displayed by humans and animals.

Artificial Intelligence

NOW YOU CAN WRITE SOMETHING REALLY AWESOME IN THIS AREA

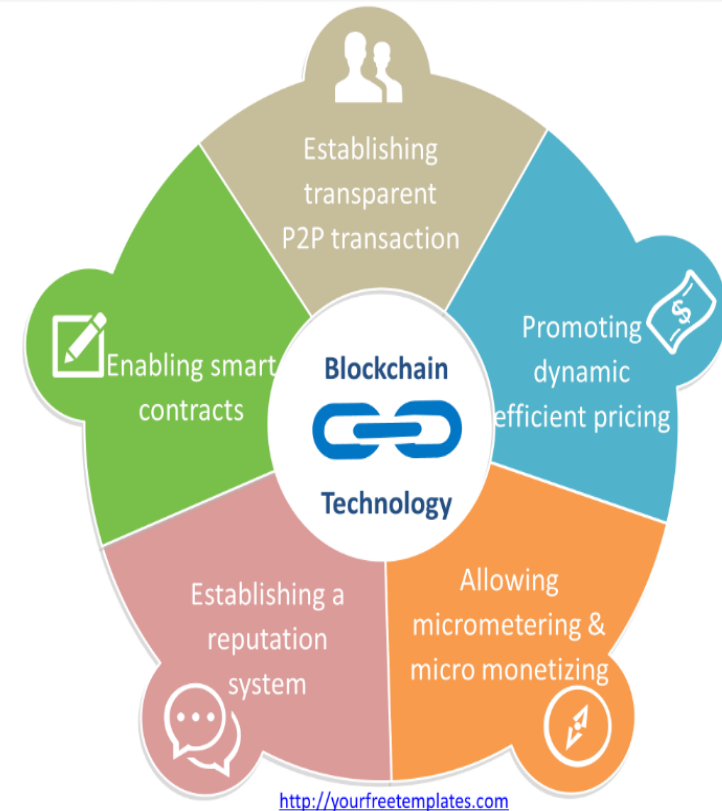

Lorem Ipsum is simply dummy text of the printing and typesetting industry. Lorem Ipsum has been the industry's standard dummy text ever since the 1500s, when an unknown printer took a galley of type and scrambled it to make a type specimen book. The illustration shows a dark blue silhouette of a human head in profile, facing left. Inside the head, several gears of various sizes and colors (blue, grey, and white) are depicted, some overlapping. A dashed white line traces the outline of the head and extends upwards and to the right, ending near a larger blue gear. The background is a light blue gradient.

Block Chain

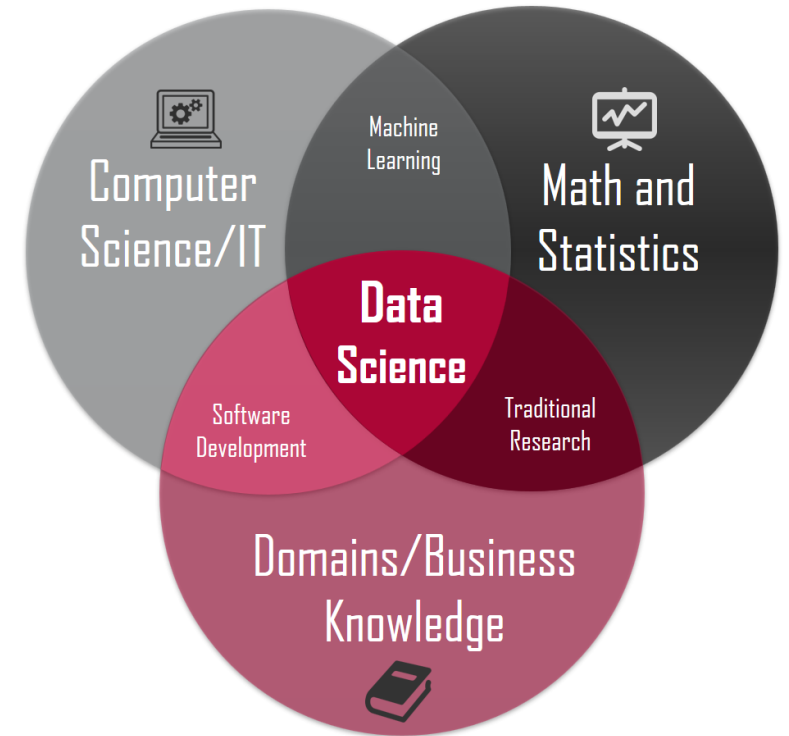

A blockchain, originally block chain, is a growing list of records, called blocks, which are linked using cryptography. Each block contains a cryptographic hash of the previous block, a timestamp, and transaction data. By design, a blockchain is resistant to modification of the data.

Five key forces of Blockchain technology

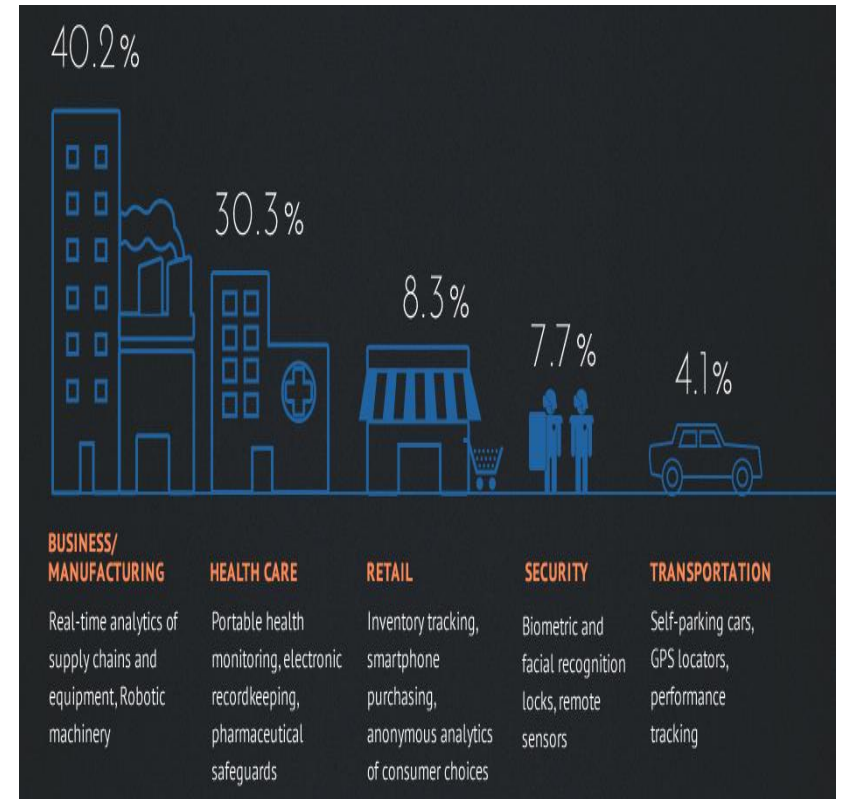

Data Science

Data science is a multi-disciplinary field that uses scientific methods, processes, algorithms and systems to extract knowledge and insights from structured and unstructured data.

IoT

The Internet of things is the extension of Internet connectivity into physical devices and everyday objects. Embedded with electronics, Internet connectivity, and other forms of hardware, these devices can communicate and interact with others over the Internet, and they can be remotely monitored and controlled.

Cloud services

Cloud storage is a model of computer data storage in which the digital data is stored in logical pools. The physical storage spans multiple servers, and the physical environment is typically owned and managed by a hosting company.

AWS

Amazon Web Services is a subsidiary of Amazon that provides on-demand cloud computing platforms to individuals, companies and governments, on a metered pay-as-you-go basis

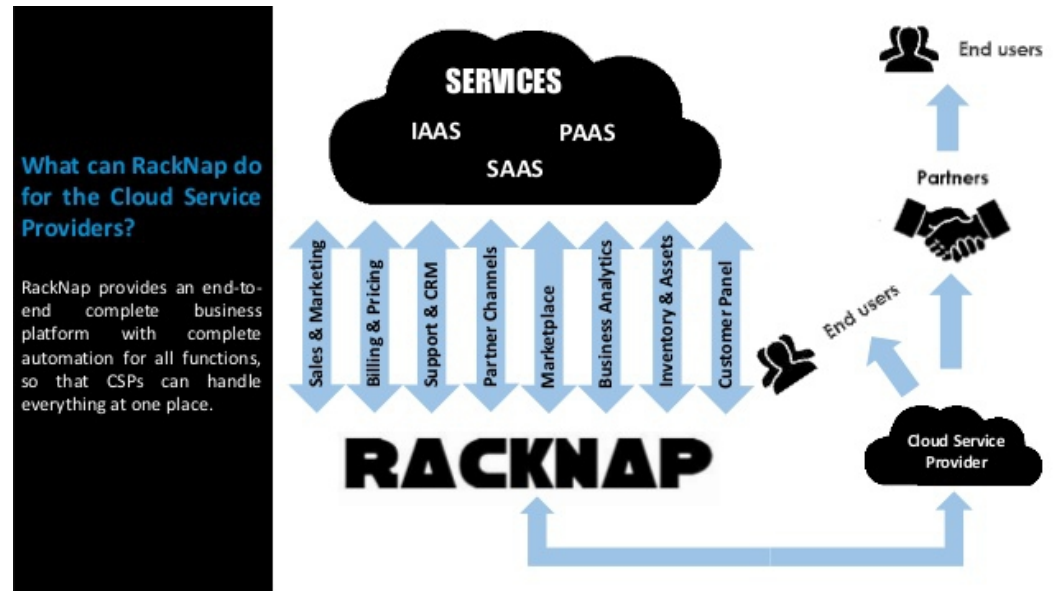

Azure

Microsoft Azure is a cloud computing service created by Microsoft for building, testing, deploying, and managing applications and services through Microsoft-managed data centers.

Rack nap

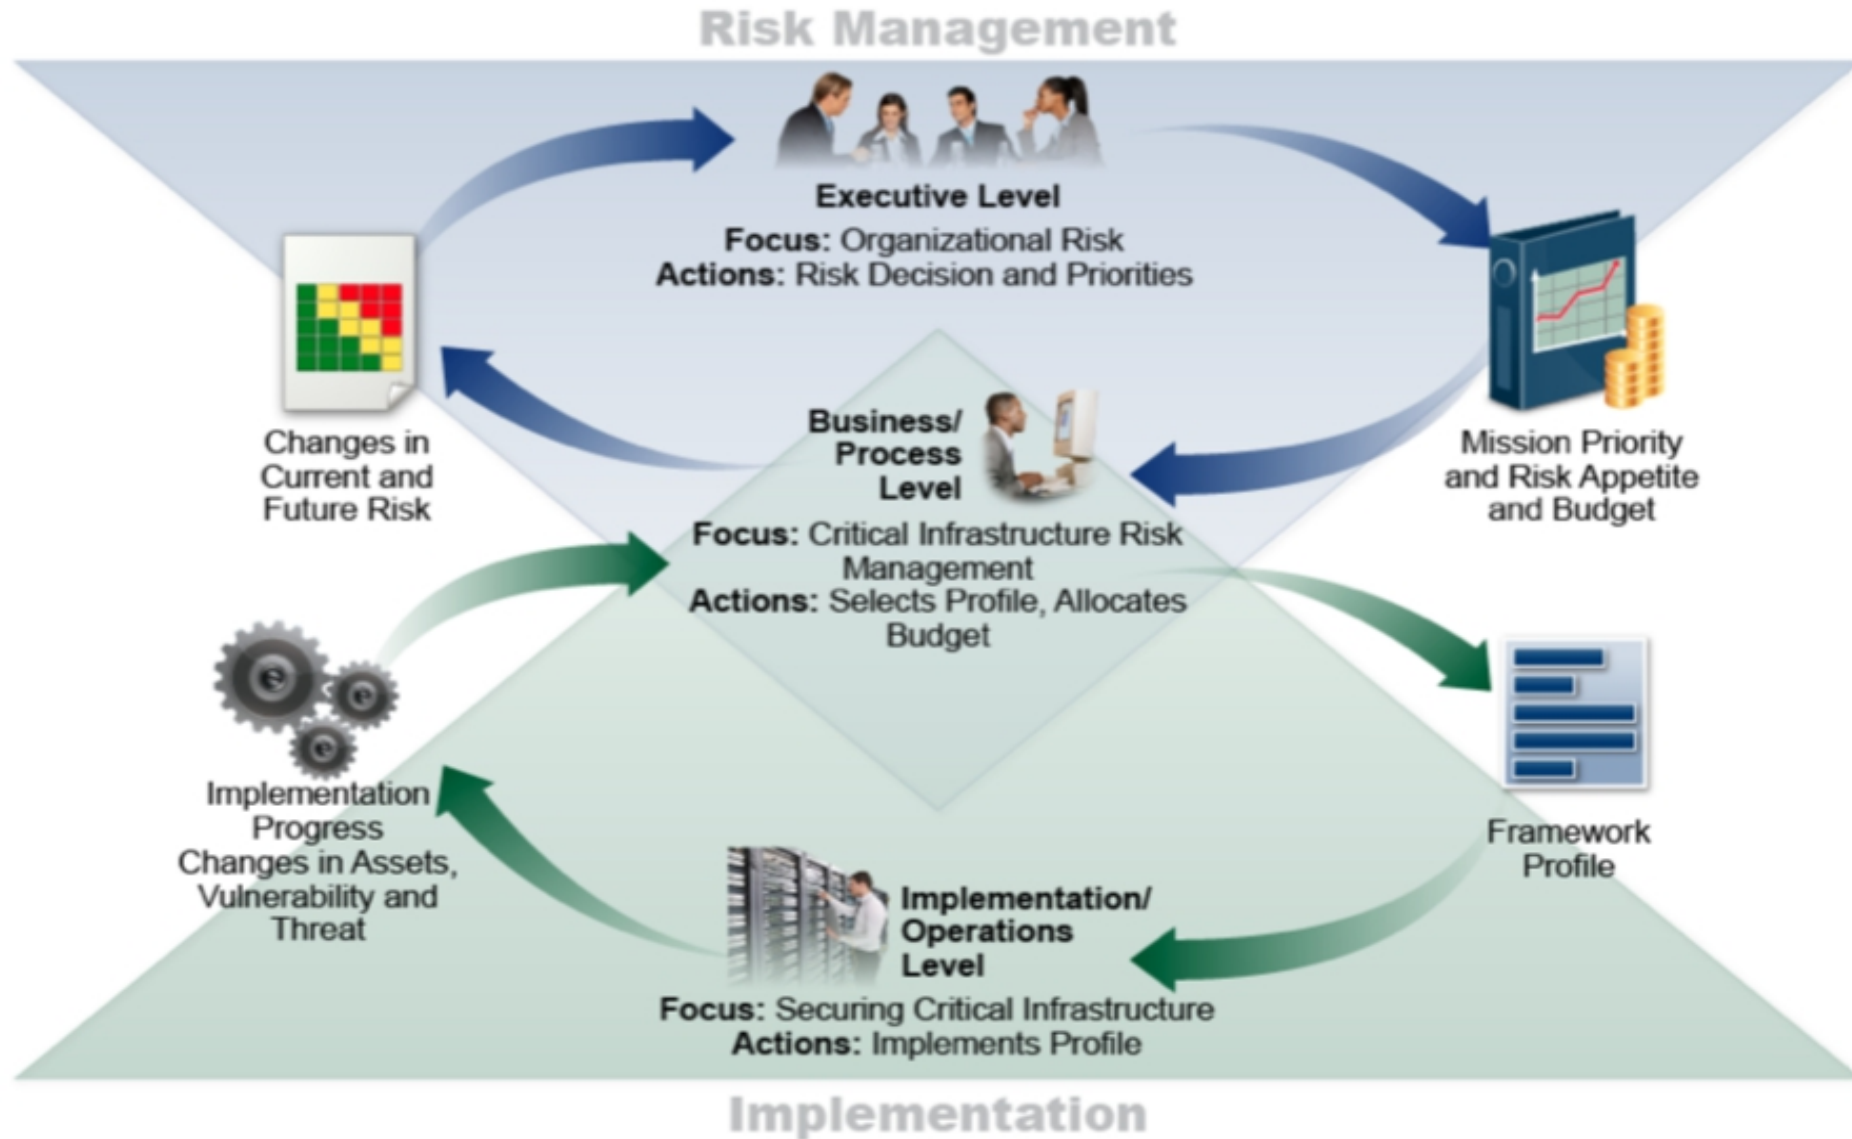

RackNap enables traditional IT vendors including system integrators, distributors, Telcos & CSPs to offer Cloud services via unified marketplace. These providers can offer the services from their own data centres as well as resell cloud services of Microsoft (Office 365, Azure), Amazon (AWS), IBM-SoftLayer, Openstack via RackNap. The platform automates ordering, provisioning & billing, offers management of sales & marketing, besides having capability of managing Inventory, support & helpdesk, multi-tier white labelled partners and creating real-time business intelligence reports.

Smart security surveillance

Artificial intelligence for video surveillance utilizes computer software programs that analyze the images from video surveillance cameras in order to recognize humans, vehicles or objects. Security contractors program is the software to define restricted areas within the camera's view like a fenced off area, a parking lot but not the sidewalk or public street outside the lot and program for times of day . (such as after the close of business) for the property being protected by the camera surveillance.

Digital Marketing

Digital marketing is the marketing of products or services using digital technologies, mainly on the Internet, but also including mobile phones, display advertising, and any other digital medium.

Virtual Reality/Augmented Reality

Industry (Smart Manufacturing)

Deep revolution of manufacturing in stages such as R&D, production, management, services, sales, and marketing

Movies and Live Broadcast

All-round hearing and visual immersive experience for audiences

Games and Social Networking

Changing traditional gaming and social methods in both auditory/visual sense and interaction

Military

Bringing advantages to visualized battles, drills, aircraft maintenance, and model design

VR/AR+

Vehicle

Clear applications and penetration to production, designing, and V2x/HUD of the vehicle industry

Education

Good demand basis and application prospects in the education domain

Retail

Enhancing shopping experience, changing the traditional shopping mode, and boosting the sales industry

Medicine

Broad applications in medical training, mental barrier clearing, rehabilitation training, and clinical support
